

Excellent torque adjustment
for more comfortable seatbelts.

Tension reducers

Spiral spring processing

Assembly

It features a mechanism in which the large spiral spring operates when the seatbelt is retracted and the small spiral spring operates when the seatbelt is worn, lessening the feeling of pressure felt by users when wearing seatbelts and enabling the use of these reducers in luxury automobiles. Our company's product is compact and can be stored the same as normal retractors.

Product features

- Can be stored the same as normal retractors
- Features shaped materials to enable desired torque variations to be realized
- Made from rolled materials, meaning there is no need for burr removal or end surface machining

Product applications

Retractors with seatbelt tension reducers
